

# HD Hyundai Marine Solution (443060)

## Standout

### Initiate coverage with TP KRW240,000

We initiate our coverage of HD Hyundai Marine Solution (HD HMS) with BUY and the TP of KRW240,000. We used a PE multiple approach to capture the company's NP growth potential in our EV estimate. The fair EV is derived by applying a 35.4x target PE to 2025F NP of KRW300.9bn. The target PE reflects a 30% premium to the 2025F PE average of 27.2x for three peers—Wartsila, Alfa Laval and Kongsberg—given HD HMS is forecast to grow at a CAGR +27.2%, more than twice the pace of its peers.

### Investment points: Easing overhang, rising retrofit demand and dividend appeal

There are three investment points. First, liquidity is anticipated to increase as overhang risks subdue. The overhang from 8,750,000 shares held by the second-biggest shareholder is likely to ease gradually. A temporary retreat due to overhang pressure may provide a BUY opportunity. In addition, the company's inclusion in Korea's major stock indices is expected to attract increased buying demand from both domestic and international funds tracking these benchmarks. Second, demand for ship retrofiting is set to rise structurally, with a potential acceleration around 2028, when the amended MARPOL Annex VI comes into effect. Third, HMS's strong NP will underpin its shareholder return policy, supporting stable share performance and an attractive dividend yield.

## What is the report about?

- Value HD Hyundai Marine Solution's business model via comparisons with peers
- Study divisional business structure, earnings estimate and short- to long-term investment points
- Initiate coverage with BUY and the TP of KRW240,000

# I. Summary & valuation

## 1. Executive summary

***Initiate coverage with  
BUY and TP of  
KRW240,000***

We initiate our coverage of HD HMS with BUY and the TP of KRW240,000. The TP was derived by dividing the fair enterprise value (EV) of KRW10.65tn by 44,829,210 shares outstanding. The fair EV was calculated by applying a 35.4x target PE to 2025F NP of KRW300.9bn. The target PE reflects a 30% premium to the 2025F PE average of 27.2x for three peers—Wartsila, Alfa Laval and Kongsberg—given HD HMS is forecast to grow at a CAGR +27.2%, more than twice the pace of its peers.

***A 30% premium to the  
peers' average PE as  
NP growth is double  
peers'***

The 30% premium is based on the NP growth gap with peers. HD HMS' NP is pegged to exhibit a CAGR of 27.2% until end-2027, more than double that of peers (14.2%). Currently, HD HMS' share price trades at 23.8x 2025F NP. The multiple drops to 15.3x based on the 2027F NP. Even with a 30% premium, valuation seems appealing given robust NP growth.

***Focus on core  
operations***

A focus must be on core operations. HD HMS engages in four business areas. By revenue mix (based on 2025F), the aftermarket (AM) solution division makes the biggest contribution (50%), followed by bunkering (35%) and eco-friendly solution (retrofit, 11%) and digital solution (4%). Ignoring bunkering that makes a 0.5% OP contribution, AM, eco-friendly retrofit and digital solution are considered core operations. Core operations make up 64.6% of overall revenue. And the AM business makes a 77.3% contribution, creating the biggest synergy with affiliates. Using engines from HD Hyundai Heavy Industries' (HD HHI) engine & machinery division, the AM operation standouts with strong potential for revenue and profitability.

***Investment points:  
1) Greater liquidity;  
2) structural demand  
growth for eco-vessel  
retrofit; and  
3) bigger shareholder-  
returns***

There are three investment points. First, liquidity is anticipated to increase as overhang risks subdue. The overhang from 8,750,000 shares held by the second-biggest shareholder is likely to ease gradually. A temporary retreat due to overhang pressure may provide a BUY opportunity. In addition, the company's inclusion in Korea's major stock indices is expected to attract increased buying demand from both domestic and international funds tracking these benchmarks. Second, demand for ship retrofitting is set to rise structurally, with a potential acceleration around 2028, when the amended MARPOL Annex VI comes into effect. Third, HMS's strong NP will underpin its shareholder return policy, supporting stable share performance and an attractive dividend yield.

## 2. Valuation

### Valuing using peers' PE

We derived a fair EV using PE multiples of global peers. PE was used to reflect MDS' superior earnings power. For shipbuilders, earnings are estimated based on the secured orders backlog. However, MDS' core profits are not linked to the backlog. As such, we applied a target PE to the 2025F NP (the nearest future).

### BUY with TP of KRW240,000

The fair EV is estimated at KRW10.65tn (35.4x target PE applied to 2025F NP of KRW300.9bn). The target PE is based on a 30% premium to the 2025 average PE (27.2x) of three peers (based on the Bloomberg consensus). And we divided the fair EV by 44,829,210 shares outstanding to arrive at the TP KRW240,000. Given a significant upside (50.4%) as of May 7 close, we present BUY call.

### Premium to peers' avg: 1) Core NPM is more than double peers'

The 30% premium to peers' average PE is supported by two key factors. First, the NPM from core operations is more than double that of peers. Ignoring bunkering revenue, core operations' 2025 NPM is pegged at 21.6%, 2.1 times peer average (10.4x). Unlike its peers, HMS operates with minimal fixed costs due to the absence of tangible assets while incurring no interest expenses as it remains debt-free—factors that continue to underpin its competitive advantage.

### 2. Strong NP growth

Second, in absolute terms, NP is also expected to grow rapidly. We estimate HD HMS' controlling-interest NP CAGR at 27.2% during 2025-2027. This means NP will grow at a much faster pace compared to revenue (with a CAGR of 13.7% over the same period). This acceleration is driven by the weight of services for dual-fuel (D/F) engines, which have 1.5 times higher AM service price compared to diesel engines, rising into the 20% range.

## II. Earnings outlook

### 1. Business structure

#### *Focus on core among four segments*

Focusing on the core businesses is critical. HD HMS operates across four business segments, which are AM solutions (50%), bunkering (35%), eco-friendly solutions (retrofit, 11%) and digital solutions (software-defined vessel or SDV, 4%) in the order of 2025F revenue contribution (numbers in brackets). The issue is that although the bunkering division accounts for 35% of revenue, its contribution to OP is only 0.5%. Thus, HD HMS classifies the bunkering segment as a non-core business, while grouping AM, eco-friendly and digital solutions together as its core business.

#### *The core of the core: AM solutions*

At the heart of the core business lies the AM solutions segment. We estimate HD HMS' 2025F consolidated revenue at KRW2.15tn (+23.2% yoy) and OP at KRW384.4bn (+41.5% yoy, OPM +17.9%). The core business accounts for 64.6% of total revenue, with AM solutions alone generating 77.3% of that core business revenue. The AM solutions segment delivers the greatest synergy within the group. On the back of the engines delivered by HD HHI's engine machinery division, the AM solutions segment ensures both long-term top-line growth and strong profitability, making it the true centerpiece of the company's core business.

## 2. AM solutions: Focus on marine engines

### AM solutions supplying marine equipment/parts

The AM solutions segment is engaged in supplying various equipment/parts for vessels in operation. Its customers are shipowners, and it primarily procures genuine parts for engines manufactured by HD HHI's engine machinery division to supply to these shipowners. In the two-stroke marine engine aftermarket, the main competitors capable of distributing genuine parts are engine licensors such as MAN E&S and WinGD. Shipowners ultimately choose HD HMS because of the comprehensive services and after-sales support provided alongside the parts. For four-stroke engines, HD HHI acts both as licensor and licensee, enabling HD HMS to secure a dominant share in the aftermarket. In addition, HD HHI's proprietary HiMSEN four-stroke engines are used not only for marine power generation but also for land-based power generation, meaning HD HMS' AM business also covers service for land-based power applications.

### AM to achieve both P and Q growth in 2025

We estimate the AM solutions' 2025 revenue at KRW1.07tn (+33.3% yoy) and OP at KRW349.5bn (+39.9% yoy, OPM +32.5%). This marks a phase of simultaneous growth in both price (P) and volume (Q), driven mainly by engine-related earnings. In 2025, the number of newly serviced vessels in the aftermarket should increase by 633 ships, and the aftermarket service ASP per serviced vessel is projected to rise by 34.3% compared to 2024. We expect the ASP to rise, driven by increase in newly serviced vessels equipped with dual-fuel engines (+34.3% yoy). For non-engine, we arrive at the revenue estimates for land-based power generation and smartcare (warranty service) by applying the historical three-year moving average growth rate.

**Table 5. AM revenue estimate**

| AM solution           |                                                       | Unit   | 2021A | 2022A  | 2023A | 2024A | 2025F | 2026F  | 2027F  |

### 3. Bunkering: Sourcing and selling fuel

#### ***Bunkering involves refueling ships***

Bunkering is a fuel supply business. HD HMS is engaged in refueling new ships built by the three shipyards under HD Korea Shipbuilding & Offshore Engineering (HD KSOE), namely HD Hyundai Heavy Industries, HD Hyundai Mipo and HD Hyundai Samho, when they conduct sea trials or set sail, as well as refueling ships already in operation when they call at ports in each region. The bunkering products supplied to departing and calling ships include heavy fuel oil (HFO) and diesel that are primarily sourced from HD Hyundai Oilbank and sold with a small markup. LNG bunkering is not authorized without separate approval as it falls under the jurisdiction of the Korea Gas Corporation.

#### ***Simple business of procuring and reselling refined products***

The bunkering division's 2025 revenue is estimated at KRW760.9bn (+7.8% yoy) and OP at KRW1.7bn (-10.3% yoy, OPM +0.2%). Ships calling at ports far outnumber new ships departing annually. As such, servicing calling ships is expected to generate 95.7% of revenue in 2025 with roughly 60% of total from providing services in Singapore, a logistics hub. As bunkering simply involves procuring and reselling refined products, it is hard to earn fat margins. Unless the scope of bunkering products is widened, bunkering will remain a non-core business.

**Table 8. Bunkering revenue estimates**

| Bunkering type |                             | Unit        | 2021A   | 2022A   | 2023A   | 2024A   | 2025F   | 2026F   | 2027F   |

#### 4. Eco-friendly solution: Ship retrofitting based on orders

##### *Eco-friendly solution retrofits existing ships*

The eco-friendly solution division involves retrofitting existing ships to meet marine environment standards. Marine environment encompasses both the seawater and the atmosphere. Retrofit demand usually appears when agreements adopted by the Marine Environment Protection Committee (MEPC) of the International Maritime Organization (IMO) come into effect. As the specifications resulting from the retrofitting of existing ships are incorporated into the basic specifications of new ships, a cycle is created in the ship retrofit market. This is why the markets for retrofitting ships with sulfur dioxide scrubbers and ballast water treatment systems (BWTS) are classified as the first generation. At present, HD HMS is focusing on demand for retrofitting ships to incorporate natural gas (liquefaction, vaporization) or reduce CO<sub>2</sub> emissions while its order-taking strategy remains the same.

##### *Generates revenue from backlog*

The eco-friendly solution division's 2025 revenue is estimated at KRW235.8bn (+44.2% YoY) and OP at KRW23.6bn (+106% yoy, OPM +10%). Unlike other operations, the eco-friendly solution division generates revenue from backlog accumulated through contracts with ship owners. We considered the end-2024 backlog worth USD125mn, the new engine part load optimization (EPLO) contract signed in 1Q25 valued at USD43mn and the project schedule to forecast earnings. Nine ships retrofitted with a reliquefaction system (total USD90bn, USD10mn per vessel) based on the end-2024 backlog will be delivered one by one through 1H26. The floating storage unit (FSU) retrofit project (USD27mn) will likely be completed and delivered by 1H25. For EPLO services, we assumed that the company will secure 30 new ships every quarter from 2Q25 given its full-year target of 150-160 ships and that the ships will be delivered within two quarters after taking order to estimate the revenue.

**Table 9. Eco-friendly solution revenue estimates**

| Solution type  |                          |                     | Unit   | 2021A | 2022A | 2023A | 2024A | 2025F | 2026F | 2027F |

## 5. Digital solution: Integrated control service

### **Digital solution offers information integrated control service for ship operations**

The digital solution division offers services that integrate and control the various information needed to run ships. It is basically a software subscription service. The main objective is to closely monitor the operational status of ships, optimize routes to reduce fuel consumption and provide solutions to cut emissions in specific maritime regions (OceanWise). The company is expanding its client base from ship owners taking delivery of ships built by the Big 3 shipyards to include owners of ships already in operation.

### **Orders being converted into revenue, but new contracts are being signed even faster**

We peg the digital solution segment's annual revenue at KRW80bn (+13.2% yoy) and OP at KRW9.6bn (+12.9% yoy, OPM +12%) in 2025. Our revenue estimate was derived by applying the moving CAGR of the past three years while the OP estimate assumes of a low-teen OPM. As of end-4Q24, the orders backlog for digital control amounted to USD134mn and the number of contracts for OceanWise totaled to 454. As customer base (ships) continues to expand, new contracts are being signed faster than orders are translated into revenue.

**Table 11. Digital solution revenue estimates**

|                          | Unit   | 2021A | 2022A  | 2023A | 2024A | 2025F | 2026F | 2027F |

### III. Investment point

#### 1. Overhang to disappear, transactions to flow

**Investment point 1:**  
**Easing overhang**  
**volume**

Overhang should gradually disappear. The common stock overhang of HD HMS amounts to 8,750,000 shares, representing 19.5% of the common shares outstanding. The entire overhang volume is currently held by the firm's second-largest shareholder, Global Vessel Solutions, a private equity fund (PEF) that has KKR as GP. The mandatory lock-up period after listing expired on November 7, 2024, and on February 25, this year, 2,000,000 shares out of the initial 10,750,000 shares held by the second-largest shareholder were sold off in an off-hour block trade.

**Share price slips amid**  
**overhang volume**  
**unloads may offer BUY**  
**chances**

When the overhang shares are released, the point at which the share price mechanically drops, a BUY opportunity will be presented. The remaining shares held by the second-largest shareholder are expected to be released in four to five separate block trades. Since the company is now in a phase where both earnings and dividends are growing, the PEF would most likely favor to benefit from the ownership value for a long period of time, meaning the possibility of share price shocks from block trades is low, as the sell-offs are expected to be carried out gradually over time. As overhang volume lightens, stock transactions would likely be boosted as well, which is a pro to the share price. Currently, the floating shares in the market represent only 16% of the total shares outstanding, with the daily trading volume barely exceeding 100,000 shares. Overhang releases could potentially meet buying demand arising from benchmark funds at home and abroad following the stock's inclusion to national and sectoral indices, as well as demand from investors who could not overweight on the stock due to limited transactions in the market despite their high convictions in HD HMS.

## 2. Retrofit demand for CO<sub>2</sub> emission reduction increasing

### Investment point 2: Growth of green solutions

The first long-term investment point for HD HMS is the growth potential of the green solution segment. The demand for retrofitting existing vessels among shipowners is expected to surge around 2028. This is primarily due to the tightening of greenhouse gas emission regulations, which will soon reach a point where shipowners can no longer delay compliance. The year 2028 marks the enforcement of the amendment to Annex VI of MARPOL, agreed upon at the 83rd MEPC session. Starting from 2028, shipowners will be required to pay carbon taxes based on their greenhouse gas fuel intensity (GFI) tier if their emissions exceed the set limits. This regulation is expected to drive newbuild demand to replace existing ships, especially among tankers, feeder container ships, and bulk carriers. The problem is that shipbuilders lack available newbuild slots and that shipowners are now more hesitant to place orders to Chinese shipyards where orders for the above-mentioned ship types were usually placed. The current situation is reminiscent of the surge in scrubber retrofit demand seen around 2020 when sulfur oxide (SO<sub>x</sub>) emissions regulations extended beyond the Emission Control Area (ECA). With demand for CO<sub>2</sub> solution projects including conversions to dual-fuel increasing, the green solution segment should position as HD HMS' core business.

### 3. Strong profit-making capability, leading to larger resources for shareholder returns

#### Investment point 3: Large dividend appeal

Another long-term investment point lies in the firm's strong dividend appeal. For the next three years, HD HMS' NP is projected make yoy climb of 32%, 25.4% and 24.2%, respectively. Investors must note that the firm's shareholder return policy targets payout ratio range of 50%-70%, and the current payout ratio range has neared the upper end of that historic range. Currently, the dividend for common stock in 2025 is estimated to be KRW4,700 (KRW 700 in 1Q25, KRW 4,000 in end-2025) and if purchased at the closing price of KRW153,000 on May 2, the dividend yield would amount to 3.1%. However, the yield could go as high as 4.8% given that resources for dividend distribution are generally expanded alongside NP growth. As substantial upside potential exists for earnings due to probable new orders in the green solution segments the resources for dividend could expand even further. This presents a safe opportunity to benefit from both share price upturn and rising dividend yield.

## Appendix. Peer study

### Valuation peers: Wartsila, Alfa Laval, Kongsberg

We selected three global peers for valuation benchmarking: Wartsila (Finland), Alfa Laval (Sweden), and Kongsberg (Norway). All three companies develop and sell marine-related equipment based on proprietary technology and also operate aftermarket (AM) service businesses. In terms of business composition, these peers are comparable to HD Hyundai Marine Solution, in the following order: Wartsila, Alfa Laval, and Kongsberg.

### HD Hyundai Marine Solution, the only pure merchant marine MRO player

HD Hyundai Marine Solution is the only company exclusively focused on merchant marine MRO services. There is no direct one-to-one comparable peer. The key differentiator lies in the separation of equipment manufacturing and AM services. HD Hyundai Marine Solution's AM business model is built around servicing engines (marine and land-based) produced and delivered by HD Hyundai Heavy Industries' Engine & Machinery division. In contrast, peer companies primarily generate revenue from equipment or software sales, with AM services functioning as a supplementary revenue stream. These peers are also suppliers of key components—such as scrubbers—when HD Hyundai Marine Solution performs green retrofit projects.

**Wartsila, specialized in four-stroke engines**

**Marine segment accounts for 47% of total sales in 2024**

**Wartsila (Finland): Manufacturer of four-stroke engines for ships and land-based power generation**

Wartsila focuses on manufacturing four-stroke engines. Among the products made by HD Hyundai Heavy Industries' Engine & Machinery business, the HiMSEN engine is most comparable in terms of use cases and service targets (marine and land-based power generation). Wartsila was also the original developer of WinGD, one of the two main licensors of two-stroke low-speed engines, but sold all its shares to China's CSSC in June 2016 to concentrate solely on the four-stroke business.

Wartsila's comparable business to HD Hyundai Marine Solution is its Marine segment, which generated 47.3% of the company's 2024 consolidated sales with an OPM of 11.9%. Wartsila manufactures and services four-stroke engines and related components (e.g., shafts), as well as various marine gas treatment systems such as scrubbers, BOG reliquefaction modules, and ballast water treatment systems (BWTS).

**Alfa Laval, specialized in marine exhaust gas treatment and heat exchanger systems**

**Marine segment accounts for 33% of 2024 total sales**

## Alfa Laval (Sweden): Specialist in marine exhaust gas treatment systems and heat exchangers

Alfa Laval is a specialized manufacturer of marine exhaust gas treatment systems and heat exchangers. The company holds a dominant position in industrial centrifuges (separators), heat exchangers, and fluid handling systems. Its three business divisions are Food & Water, Marine, and Energy—based on the application of its proprietary technologies. The Food & Water segment is currently the largest revenue contributor.

The Marine segment is the business segment that most closely corresponds to HD Hyundai Marine Solution. In 2024, 32.7% of consolidated revenue was generated by the Marine segment, which recorded an OPM of 16.7%. Its product lineup includes scrubbers, exhaust gas recirculation (EGR) water treatment systems for SOx and NOx reduction, and BWTS. It is also one of the suppliers used by HD Hyundai Marine Solution for sourcing equipment when performing eco-friendly ship retrofits.

**Kongsberg, a diversified business operator**

**Marine-related subsidiaries accounts for 51% of the holding company's consolidated revenue**

## Kongsberg (Norway): Defense, aerospace, and marine systems manufacturer

Kongsberg is a diversified business group. Kongsberg Gruppen, listed on the Oslo Stock Exchange, operates as a holding company and runs three wholly owned subsidiaries: Kongsberg Defense & Aerospace, Kongsberg Maritime, and Kongsberg Discovery. These units cover defense and aerospace, marine, and high-tech marine solutions, respectively.

The business segment comparable to HD Hyundai Marine Solution is Kongsberg Maritime, a marine-focused subsidiary of the holding company. In 2024, Kongsberg Maritime accounted for 50.7% of the holding company's consolidated revenue and recorded an OPM of 13.5%. The company specializes in ship automation, bridge systems, and dynamic positioning systems. Notably, Kongsberg's systems are adopted not only in commercial vessels but also in naval warships.
